So, I am afraid that I can't give you a solution for how to run Windows 10 on an ICH10R with RAID and RST, maybe others can give some suggestions, let's look forward to them.. Hi there, I'm having major Problems upgrading to Win10 The story so far: I'm running Win7 Ultimate (DE) on an ASUS P5Q-E board with Intel P45 Chipset and an ICH10R SATA controller.

Intel also provides Rapid Storage Technology (RST) software to manage and monitor the RAID volumes.. I updated my ICH10R drivers to v14 8 0 1042 since those are compatible to Win10, according to Intel.. And when I got it to upgrade on a non-ICH10R controller it didn't recognize any drives (normal or RAID) connected to the ICH10R and no amount of persuasion would help.

intel driver

intel driver, intel driver update, intel driver download, intel driver graphics, intel driver update utility installer, intel driver and support assistant reddit, intel driver support assistant installer, intel driver and support assistant popup, intel drivers linux, intel driver bluetooth, intel driver update utility, intel driver and support assistant not working, intel drivers & software page, intel driver installer, intel driver & support assistant popup

Nice, but Win10 comes with old RAID drivers v13 3 something and obviously without the Intel RST Management software.. Everything works like a charm:-) But the time came to upgrade to Win10 Pro (DE), it seems the free upgrade expires soon.. With this version I succeed on upgrade my Window 7 Ultimate (IT) to Windows 10 PRO (IT) without problem, only two little trick to use that version.. Checked the Intel website but no RST package v 13 3 * is available and the drivers are about 2 years old! So I tried to force a driver installation via Device Manager / Update Driver and this installed v14.

intel driver download

Hello, I have the same problem with an ASUS P6T Deluxe and a bootable RAID 1 configuration, but perhaps, I found a working solution.. Drivers and Downloads Automatically detect and update drivers and software Also switching the boot SSD back to the ICH10R resulted in an 'Inaccessible Boot Device' blue screen.

intel driver and support assistant reddit

BTW I'm sure somebody will recommend Plan 'C': Nuke the RAID volumes on the ICH10R and use Windows RAID with the old SATA drivers provided by Win10, but seriously: I like the Intel solution, I'm used to it and my system is admittedly old but still rather well supported and there should be some way to make this work??So now I'm back on good old Win7 and wondering if anybody has Win10 running on an ICH10R with RAID and RST support and how they did it? Hi Marcus, I appreciate your efforts, it's wise to degrade to Windows 7 to make computer runs fine.. 8 0 1042, even though I don't see Windows 10 in the support OS list, but as you said, this version is compatible with Windows 10.. I think you have done enough, download the proper driver and install successfully, the actual condition is that it does can't work on Windows 10 machine, I search online for a long time, no user can give a successful reference for us.. Regards Please mark the reply as an answer if you find it is helpful If you have feedback for TechNet Support, contact.. So, I am afraid that I can't give you a solution for how to run Windows 10 on an ICH10R with RAID and RST, maybe others can give some suggestions, let's look forward to them.. Finally I gave up! Seriously, who needs upgrades when you have backups??So it's Plan 'B', re-install Win10 from scratch! Installation works fine with all drives connected to the ICH10R, all the drives are there, too and Device Manager shows no errors.. Hi Marcus, I appreciate your efforts, it's wise to degrade to Windows 7 to make computer runs fine. e10c415e6f
